DEPARTMENT OF MATHEMATICS AND STATISTICS

AUGUST SESSION EXAMINATION FOR BACHELOR EDUCATION (SCIENCE)

SZL 300: BIOSTATISTICS

DATE: SCHOOLBASED

TIME:

INSTRUCTION:

Answer Question **ONE** which is compulsory and any other **TWO** Questions

QUESTION ONE (COMPULSORY) (30 MARKS)

- a) Discuss three advantages of sampling over census (6 marks)
- b) Differentiate the following terms as they apply in scientific research
- i) Response and independent variables
 - ii) Descriptive and inferential statistics
 - iii) Null hypothesis and Alternative hypothesis (6 marks)
- c) The doctor presumed that the average heart beat for his aged patients was 65 per minute. The average for 10 days was: 66, 65, 69, 70, 69, 71, 70, 63, 64 and 68. The t-test output at $\alpha = 5\%$ was as given

The sample t-test output, for the test value=65						
	t	df	Sig. (2-tailed)	Mean difference	95% CI of the difference	
					Lower	Upper
Attendance	2.825	9	0.020	2.500	0.4979	4.5021

- i. State the hypothesis for the above scenario
 - ii. Based on the t-value and the sig.(2-tailed) value make statistical conclusion
 - iii. Interpret the 95% CI lower and upper difference values (6 marks)
- d) Discuss any four types of test-statistics and highlight when appropriate to use each (8 marks)

- e) Determine the regression equation of Y on X given that

$$\sum xy = 130, \sum x^2 = 2400, \bar{x} = 60 \text{ and } \bar{y} = 4. \quad (4 \text{ marks})$$

QUESTION TWO (20 MARKS)

- a) The data below is a summary of copy typing speed per minute before and after in service training.

Participant	A	B	C	D	E	F	G	H
Rate Before	85	124	172	123	111	139	99	77
Rate after	105	160	175	143	156	127	95	100

Did the training result to any improvement on the typing speed (8 marks)

Below are the ABC co. daily sales during a particular week in the year 2014.

Sales (KSH.000)	11-20	21-30	31-40	41-50	51-60
Frequency	3	6	11	3	2

Determine;

- Average sales per day
 - Median
 - Mode and
 - Standard deviation.
- (12 marks)

QUESTION THREE (20 MARKS)

- a) Highlight two properties of a good measure of data variation (2 marks)
- b) The lecturer presumed that the average class attendance was 65 students on average. He did call register for 10 days and observed the following: 66, 65, 69, 70, 69, 71, 70, 63, 64 and 68. Test the hypothesis that $\mu=65$ (4 marks)
- c) Discuss any four types of test-statistics and highlight when appropriate to use each (8 marks)

- d) A sample of 200 persons with a particular disease was selected. Out of these, 100 were given a drug and the others were not given any drug. The results are as follows:

	Drug	No Drug	Total
Cured	65	55	120
Not Cured	35	45	80
Total	100	100	200

Tests, whether the drug is effective or not

(6 marks)

QUESTION FOUR (20 MARKS)

- a) The function $\hat{y} = 3.5 + 1.23x_1 + 0.78x_2$ is model of predicting the expected yield (kg '000') per hectare of a certain crop as influenced by fertilizer $k63(x_1)$ and the humidity level (x_2). Interpret the values 3.5, 1.23 and 0.78

(6 marks)

- b) Differentiate the following terms as apply in social research.

- i. Type I and Type II error
- ii. Sample and population
- iii. Two tailed and one tailed test

(6 marks)

- c) The table below shows the scores of eight interviewees on aptitude and subject matter knowledge

Interviewee	A	B	C	D	E	F	G	H
Aptitude test score	15	20	28	12	40	60	20	80
Subject matter score	40	30	50	30	20	10	30	60

Compute the rank coefficient of correlation

(8 marks)

QUESTION FIVE (20 MARKS)

- a) Highlight three assumptions for regression modeling (3 marks)
- b) By citing examples distinguish between discrete and numeric variables (6 marks)
- c) A manufacturer wished to compare the performance of different machine brands, their performance difference is summarized in ANOVA table below.

Source of Variation	Degrees of Freedom	Sum of Squares	Mean sum of Squares	F – value
Between machines	$4 - 1 = 3$	540.69	180.23	$F = \frac{180.23}{7.15} = 25.207$
Error	$16 - 4 = 12$	85.75	7.15	
Total	$16 - 1 = 15$	626.44		

- i) Based on the table above state the number of machine brands compared (1 mark)
- ii) Explain the two sources of variation in column one of the table (2 marks)
- iii) When is it appropriate to use ANOVA and F-test for data analysis (4 marks)
- iv) Was there a significant difference in their performance at $\alpha=5\%$ (4 marks)
