

# MACHAKOS UNIVERSITY

University Examinations 2022/2023 Academic year

SCHOOL OF PURE AND APPLIED SCIENCES

DEPARTMENT OF PHYSICAL SCIENCES

THIRD YEAR SECOND SEMESTER EXAMINATION FOR  
BACHELOR OF SCIENCE (ANALYTICAL CHEMISTRY)

SAN 305: PHOTOCHEMISTRY

DATE: 20/4/2023

TIME: 8:30 – 10:30 AM

---

## INSTRUCTIONS

- The paper consists of **two** sections.
  - Section **A** is **compulsory** (30 marks)
  - Answer any **two** questions from section **B** (each 20 marks)
  - Check for periodic Table behind the Question paper (page 4)
- 

### Useful constants

$$c = 3.0 \times 10^8 \text{ m/s} \quad h = 6.626 \times 10^{-34} \text{ Js} = 6.624 \times 10^{-27} \text{ erg-sec}, N = 6.02 \times 10^{23}$$

$$1 \text{ kcal} = 4200 \text{ J}$$

---

## SECTION A

### QUESTION ONE (30 MARKS)

- a) State and explain the laws of photochemistry (4 marks)
- b) The energy gap between the triplet ground state and the excited singlet state for molecular oxygen is  $120 \text{ kJ mol}^{-1}$ . Calculate the wavelength of photons given off if an excited singlet state relaxes to the ground state with emission of light (3 marks)
- c) (i) Using the Jablonski diagram explain the various photophysical processes (8 marks)
- (ii) Use the Jablonski diagram to explain why the wavelength of fluorescence is greater than that of phosphorescence (4 marks)

- d) A solution which transmits 12 % of a certain wavelength of light beam is passed through a 1.5 cm cell containing 0.45 molar solution. Calculate the:
- (i) Transmittance (1 mark)
  - (ii) Absorbance (2 marks)
  - (iii) Molar extinction coefficient (2 marks)
- e) (i) Explain why the quantum yield for the photochemical formation of hydrogen chloride is high in the absence of oxygen but low when oxygen is present (2 marks)
- (ii) Calculate the quantum yield of gaseous HI when irradiated with a wavelength of 253 nm where 0.018 moles of HI decompose per kcal of radiant energy absorbed (4 marks)

## **SECTION B**

### **QUESTION TWO (20 MARKS)**

- a) Using relevant diagrams, explain each of the following phenomenon:
- (i) Kasha's rule (3 marks)
  - (ii) Stokes shift (3 marks)
  - (iii) Franck-Condon principle (3 marks)
- b) State four differences between fluorescence and phosphorescence (4 marks)
- c) Explain the mechanism of photosensitization (5 marks)
- d) State the conditions for high or low quantum yield (2 marks)

### **QUESTION THREE (20 MARKS)**

- a) State four causes of low quantum yield (4 marks)
- b) Distinguish between;-
- (i) Primary and secondary photochemical process (2 marks)
  - (ii) Chemiluminescence and photochemical reaction (2 marks)
- c) Describe the principle of flash photolysis (5 marks)
- d) The extinction coefficient of  $K_3[Fe(CN)_6]$  at 419 nm is  $1020 \text{ cm}^2 \text{ mol}^{-1}$ . Determine the percentage of light that is transmitted from a cell of thickness 2.0 cm containing  $1 \times 10^{-4}$  M  $K_3[Fe(CN)_6]$  solution (4 marks)
- e) A solution containing 5.20 ppm  $KMnO_4$  had a percentage of 32 % in 1.25 cm cell at 520 nm. Calculate the molar absorptivity of the solution at 520 nm (3 marks)

#### QUESTION FOUR (20 MARKS)

- a) State five differences between photochemical reaction and thermal reaction (5 marks)
- b) Complete and name the types of photochemical reactions given below

- c) State four applications of fluorescence (4 marks)
- d) Show a photochemical reaction between  $H_2$  and  $Br_2$  and determine the expression for the rate of formation of  $HBr$  (5 marks)

#### QUESTION FIVE (20 MARKS)

- a) (i) What is an actinometer? (2 marks)
- (ii) Briefly explain the working principle of any one chemical actinometer (6 marks)
- b) Using a schematic diagram, show an experimental set up how you will determine the quantum yield of a solution and state the function of each component in your experimental set up (7 marks)
- c) Substitution of carboxylic acid or carbonyl group on an aromatic ring generally inhibits fluorescence. Explain (2 marks)
- d) Using the structure of quinine molecule below explain which part will likely behave as a chromophore and as a reaction centre (3 marks)

|                                                        |                    |                    |                    |                    |                    |                    |                    |                    |                    |                    |                    |                    |                    |                    |                    |                   |                    |
