

MACHAKOS UNIVERSITY

University Examinations for 2018/2019 Academic Year

SCHOOL OF AGRICULTURAL SCIENCES

DEPARTMENT OF AGRIBUSINESS MANAGEMENT AND TRADE

FIRST YEAR FIRST SEMESTER EXAMINATION FOR
MASTER OF SCIENCE IN AGRIBUSINESS MANAGEMENT

AGB 802: QUANTITATIVE METHODS IN AGRIBUSINESS

DATE: 21/6/2019

TIME: 10:00 – 1:00 PM

INSTRUCTIONS: Answer **QUESTION ONE** and **TWO other** questions. Clearly show all your workings. Statistical tables have been provided.

QUESTION ONE (COMPULSORY) (20 MARKS)

- a) Suppose the average number of trucks arriving at a warehouse in a 30-minute period of time is 8. What is the probability of exactly four arrivals in 30 minutes? (2 marks)
- b) A project activity has pessimistic, optimistic and most likely time estimates of 39, 27 and 32 days, respectively. Compute the activity's
- i) Mean duration (1 mark)
 - ii) Standard deviation of the duration (1 mark)
- c) A company uses 5,200 packets of a certain fertilizer per annum, which costs Ksh.1,250 each to purchase. The ordering and handling costs are KSh 7,500 per order and carrying costs are 9% of purchase price per annum. Compute the economic order quantity. (3 marks)
- d) A sample of 23 packets of rice returned a mean of 24.9Kg and standard deviation of 2.9Kg. What is the 99 percent confidence interval for the population mean? (3 marks)

e) Using the data below:

- i) find the correlation coefficient (3 marks)
- ii) comment on the relationship between the two variables (1 mark)

Business age (years)	21	23	24	25	26	27
Profit (KSh Million)	1387	1754	1817	1040	1273	1529

f) The following data shows sales revenue from 150 companies. Find the

- i) Mean revenue (3 marks)
- ii) Median revenue (3 marks)

Revenue (Ksh)	200-600	600-1,000	1,000-1,400	1,400-1,800	1,800-2,200	2,200-2,600
Frequency (f)	8	16	28	33	40	25

QUESTION TWO (20 MARKS)

- a) A customer claims that eggs from two of your poultry farms are not of the same size. As the production manager you sample 23 eggs from one farm and 17 eggs from the second farm and obtain mean weights of 56.3gm and 53.1gm respectively. The sample standard deviation of farm1 eggs is 2.3gm while that of farm2 eggs is 2.9gm. Show whether you find the consumer's claim statistically justified (8 marks)
- b) A farmer must decide on the enterprise to invest in, to maximize returns in her 30 acres farm. The farmer can produce maize, kales, sorghum or tomatoes. Crop output is dependent on weather. When rains are average, the farmer can produce 0.7, 1.2, 1.5 and 0.9 tons per acre of maize, kales, sorghum and tomatoes, respectively. Yields under high rainfall are 1.9, 1.6, 1.7 and 2.8 tons per acre, respectively, while under poor rains, the yields are 0.3, 0.5, 1.2 and 0.5 tons per acre, respectively. The table below shows rainfall probabilities and associated grain prices. Advise the farmer based on:
 - i) Any two methods applying the ignorance approach. (4 marks)
 - ii) The expected value approach (8 marks)

Enterprise	High Rainfall (probability = 0.3)	Low Rainfall (probability=0.2)	Medium Rainfall Probability = 0.5)
	Price (Ksh/kg)	Price (Ksh/kg)	Price (KSh/kg)
Maize	21	35	25
Kales	15	45	30
Sorghum	35	60	45
Tomatoes	50	120	75

QUESTION THREE (20 MARKS)

a) The data below was extracted from records of Maziwa Ltd.

- i) Develop a linear regression equation for estimating output (10 marks)
- ii) Predict milk output if the firm spends KSh 48,000 on supplements (2 marks)

Supplementscosts (Ksh '000)	6	11	17	27	32
Milk output ('000 litres)	5	13	20	23	27

b) A cereal trader intends to distribute wheat from her four warehouses to four towns at the lowest possible cost. Quantities available at the warehouses are 50, 40, 75 and 40 tons respectively, while wheat demand is 60, 45, 30, and 70 tons in the four towns, respectively. It will cost the trader KSh 5500, 4000, 1000 and 2500 to ship a ton of wheat from the first warehouse to towns 1,2,3 and 4; KSh 3000, 5000, 4500 and 2,000 to ship a ton of wheat from the second warehouse to towns 1,2,3 and 4; KSh 4000, 4700, 1500 and 2,000 to ship a ton of wheat from the third warehouse to towns 1,2,3 and 4, respectively, and KSh 3500, 1250, 6500 and 1,800 to ship a ton of wheat from the fourth warehouse to towns 1,2,3 and 4, respectively.

Advise the trader on the best transport routes using:

- i) The Intuitive Lowest-Cost Method (4 marks)
- ii) The North West Corner Rule (4 marks)

QUESTION FOUR (20 MARKS)

- a) Below is data showing profits earned by agrodealer shops in three counties in 2018. Test for the difference in profits across the counties. (10 marks)

Profit (KSh)			
County A	County B	County C	County D
10	34	6	35
14	30	42	32
20	76	26	17
12	50	19	5

- b) The following table gives data for normal and crashed time and cost of project activities.
- Draw the project network using the activity-on-arrow approach (3 marks)
 - Determine a crashing scheme for the project so that the total project time is reduced by 12 weeks (4 marks)
 - What is the overall project duration after crashing? (1 mark)
 - What is the optimal project cost after crashing? (2 marks)

Activity	Predecessor Activity	Time (wks)		Cost (KSh)	
		Normal	Crash	Normal	Crash
A		4	3	8000	9000
B	A	5	3	16000	20000
C	A	4	3	12000	13000
D	B	6	5	34000	35000
E	C,D	6	4	42000	44000
F	B,E	5	4	16000	16500

QUESTION FIVE (20 MARKS)

- a) The following table shows the number of farmers adopting irrigation in a certain Village.
Test whether adoption differs among men, women and the youth (8 marks)

Adoption	Women	Men	Youth
Number of farmers adopting irrigation	9	16	2
Number of farmers not adopting irrigation	27	25	17

- b) Suppose a firm is producing two types of products P1 and P2 and has approached you for advice. The profits per Kg of the two products are KSh 60 and Ksh 80 respectively. These two products require three types of inputs: land, labor and capital, as shown in the table below.

- i) Formulate the problem in the form of linear programming model (3 marks)
ii) Using the simplex method, advise the firm (6 marks)
iii) Comment on resource usage (3 marks)

Profit/Kg	P1 (KSh 60)	P1 (KSh 80)	Total available
Land (acres)	3	2	600
Labor (man days)	30	50	800
Capital (KSh '000)	5	6	1100

B.1 Areas under the Normal Curve

Example:
If $z = 1.96$, then
 $P(0 \text{ to } z) = 0.4750$.

B.3 Critical Values of Chi-Square

This table contains the values of χ^2 that correspond to a specific right-tail area and specific number of degrees of freedom.

Example: With 17 df and a .02 area in the upper tail, $\chi^2 = 30.995$

Degrees of Freedom, df	Right-Tail Area			
	0.10	0.05	0.02	0.01
1	2.706	3.841	5.412	6.635
2	4.605	5.991	7.824	9.210
3	6.251	7.815	9.837	11.345
4	7.779	9.488	11.668	13.277
5	9.236	11.070	13.388	15.086
6	10.645	12.592	15.033	16.812
7	12.017	14.067	16.622	18.475
8	13.362	15.507	18.168	20.090
